Introduction

Dear Customer,

Thank you for ordering Comment Poster – one of the world's most effective backlinks builders.

In order to achieve the best results possible, your server needs to have cURL and Zend Optimizer modules enabled (99% of hosting providers offer these modules by default).

Below you will find some hosting companies that offer premium hosting packages at a surprisingly low price. These providers are used by our clients for years, and all of them are very satisfied with fast, stable and reliable servers that are used to host Comment Poster software and their personal/business web sites.

[DimeReseller](http://www.webmasterbook.net/resources/dimereseller.php) (see more details and hosting packages from hosting company at <http://www.webmasterbook.net/resources/dimereseller.php>). If extreme performance and money-saving are your main goals, it's a great idea to use **Reseller** package which allows hosting unlimited number of domains (no extra charges) on super-fast servers.

[Hosting24](http://www.webmasterbook.net/resources/hosting24.php) (see more details and hosting packages from hosting company at <http://www.webmasterbook.net/resources/hosting24.php>). It's highly suggested to use Gold or Reseller plans for best results and maximum performance.

Attention! Enter coupon code **savebig** on Hosting24 order form and \$2 *recurring monthly discount* will be applied to your order! The code is valid for all hosting plans and billing periods.

Customer Support

If you experience any troubles installing or using the software, please visit informative and continuously updated software knowledgebase at <http://www.adsenseboy.com/support/> which was designed to save your time and provide detailed answers to frequently asked questions as well as step-by-step solutions solving most common issues.

If the installer does not work properly, cronjobs do not function, or if you experience any other issues, the knowledgebase will guide you every step of the way solving the issue. Please note; searching knowledgebase instead of submitting support tickets is always easier and faster!

Your order comes with a premium customer service and professional assistance. The only thing you are asked for; in order for our support team to provide the best service and instant assistance (without a delay due to additional questions), please read the support desk rules before submitting support tickets.

- *All types of support requests and technical questions should NEVER be sent to the sales email or contact form. Sales email and contact forms are used for pre-sale questions only. Therefore, support requests sent to the sales email are deleted without any notice.*
- *For 1st class customer support and faster assistance please use official software forum at <http://www.forum.adsenseboy.com/> or private support desk at <http://www.adsenseboy.com/support/> to get all questions answered in minutes.*
- *Please always include software login information (software administration panel URL, username and password) and FTP login details (hostname, username and password) when submitting a new support ticket, so our programmers can start working on your issue instantly.*
- *If one of your questions is not answered yet, please do NOT submit a duplicated ticket. If you have the same question asked via multiple tickets, our support system automatically marks all your tickets as "low priority" and you will have to wait for the assistance much longer.*
- *Submit a new support ticket for each new question or problem. If the first problem is solved and you have another question or problem, do not update the old ticket and submit a new one instead. However, if your old issue is not fully solved, please update the old ticket instead of submitting a new one in this case.*

Extremely Important Information

Please take a moment to read **EVERYTHING** on this page. These simple tips will save your time and prevent you from making costly and embarrassing mistakes!

- *If you experience any problems installing Comment Poster, please download the video tutorial from <http://www.commentposter.com/videotutorial.zip> for step-by-step instructions on installing and using the software.*
- *If the software requires cronjobs to be enabled, you should NEVER copy/paste the cronjob commands from this user guide into your control panel. Depending on your PDF reader, cronjob command might get corrupted and cause problems later (even if it looks perfect visually). Please ALWAYS enter cronjob commands manually.*
- *Please always refer to this user guide, video tutorial, knowledgebase and help section in the software itself for answers to your questions and solutions to possible problems. If you submit a new support ticket with question/problem which is already answered/solved in user guide, video tutorial, and knowledgebase or help section, the support ticket will be closed.*
- *When submitting a new support ticket, please always follow support desk rules (explained in the 'Customer Support' section above). Failure to comply with these rules (for example: no login information is provided) will cause support ticket closure and/or deletion.*

That's all you are kindly asked for. Please follow these simple rules and you will experience the best client service you ever had. Prove it yourself!

License Validation

In order to prevent software piracy and unauthorized usage, this software comes with advanced license validation system.

The software remotely sends callbacks with IP address, user credentials and other usage information to our servers in order to track software installation(s). The software tracks installation details only and does not collect personal user information in any way.

If customer shares his license with other people (installation details and IPs used to launch installer are automatically sent to our servers), the license might be temporarily deactivated or terminated and all installations performed using the same licensed email will automatically stop working. If license is terminated because of unauthorized usage, no refunds are provided and support contract becomes invalid.

The software also comes with a protection against fraudulent orders. When a new purchase and/or new installation is performed, the installation wizard connects to our license database. Your details (home IP address, server IP address, IP address used to make order or launch installation wizard, etc.) are stored on this database. In case the order is fraudulent (or customer wants to make a chargeback), the license is remotely terminated.

Finally, in case of fraud or unauthorized usage, all stored information is forwarded to the Internet Crime Complaint Center, National White Collar Crime Center, customer bank department and hosting provider (requesting to terminate hosting service immediately).

Automatic Software Installation + Configuration + Hosting

For best website promotion experience we recommend using software hosting and management service. In order to activate it, login to client area at <http://www.commentposter.com/customers.html> and go 'Hosting' section in navigation bar.

Click 'Activate Software Hosting Service' link and our team of experts will install and configure the software on powerful servers for you. Furthermore, your installation will be continuously monitored and automatically updated to the latest version even before it becomes available to the public. Software hosting service saves your time and money; get it today!

Automatic Software Installation

Comment Poster could be remotely uploaded to your server and automatically installed via client area. The instructions on how to perform such installation automatically are available below.

Login to customer center at <http://www.commentposter.com/customers.html> and refer to 'Installations Management' section.

Click 'new automatic installation' link and follow instructions on the screen to automatically install and configure the software on your server. Single installation allows you to promote unlimited number of sites hosted on different servers, so there is no need to make a separate installation on each site you own.

It's also highly recommended to protect your poster_admin directory with a password ('Password Protected Directories' feature is available in cPanel) for extra security.

Attention! Automatic software installation works with cPanel servers only. The feature works only for domains that have separate cPanel accounts (for example, it will not work on addon domains because addon domains share the same username with main cPanel account).

Manual Software Installation

Installing this powerful software manually is easy as well. Please follow the step-by-step instructions below to complete Comment Poster installation.

Upload all files to the domain where you wish the software to be installed. All files must be uploaded in BINARY mode (refer to your FTP client help section if you are unsure how to configure FTP software for BINARY uploads). Usually the files need to be uploaded to public_html or httpdocs directory.

Set file 'chmod_poster_config.php' and 'chmod_poster_cookie.txt' permissions to 777 using FTP client software.

Login to your cPanel (or another control panel offered by your hosting provider) and setup a new MySQL database and MySQL user/password. Add this MySQL user to the database and grant all permissions.

Run your browser and open http://www.yourdomain.com/poster_install/ to start the installation wizard. If you need more information regarding any option, simply move mouse cursor over it for an interactive popup with more details and examples.

As soon as all fields are filled, click the 'Start Installation' button. If any errors are detected, the installation wizard will provide detailed instructions on how to fix them. Otherwise, you will be able to login to the administration interface and start using the software instantly.

Finally, delete 'poster_install' directory and set file 'chmod_poster_config.php' permissions to 644 ('chmod_poster_cookie.txt' should have permissions set to 777). It's highly recommended to protect your poster_admin directory with a password ('Password Protected Directories' feature is available in cPanel) for extra security.

The installation is now finished, and it's time to perform post-installation steps that are explained in next chapter.

Attention! If you would like someone to perform Comment Poster installation for you, simply contact our certified partner [FixMyScript](#) (provide your licensed email address and cPanel/FTP login details) and their experienced programmers will setup and configure the software on your server in minutes.

Post-Installation Steps (Cronjobs)

Comment Poster is 100% automated website promotion software and does not require any user interaction because all modules are automatically launched using cronjobs.

The software uses up to 3 cronjobs (depending on your personal needs) to automate each single task. Each cronjob is explained below:

1. `coppermine_search.php`; launches sites search engine which is responsible for targeted resources search.

2. `coppermine_posting.php`; launches comments posting engine which is responsible for backlinks building.

2. `coppermine_posting_verify.php`; launches submitted comments verification engine which is responsible for scanning remote sites and looking for approved comments.

The cronjobs for these modules should look like in this example:

```
php -q /home/cpanel_username/public_html/coppermine_search.php
php -q /home/cpanel_username/public_html/coppermine_posting.php
php -q /home/cpanel_username/public_html/coppermine_posting_verify.php
```

The example above is based on cPanel server. If your hosting provider uses another control panel, please ask their support team for more information on how to setup cronjobs properly.

Attention! Variable 'cpanel_username' should be changed to the real username of your cPanel account. For example, if your cPanel username is 'someuser', the correct cronjob for comments posting engine will be:

```
php -q /home/someuser/public_html/coppermine_posting.php
```

Attention! Never copy/paste cronjob command from this user guide and always enter it manually, otherwise the software will not work.

Attention! There must be a space symbol before and after '-q'.

Attention! If the software is installed on a subdirectory, its name should be

added to the cronjob as well. For example, if your cPanel username is 'someuser' and the software is installed on 'abc123' directory, the correct cronjob will be:

```
php -q /home/someuser/public_html/abc123/coppermine_posting.php
```

The screenshot below contains one of possible cronjob configurations.

MINUTE	HOUR	DAY	MONTH	WEEKDAY	COMMAND	ACTIONS
10	*/8	*	*	*	php -q /home/someuser/public_html/abc123/coppermine_search.php	Edit Delete
25	*/8	*	*	*	php -q /home/someuser/public_html/abc123/coppermine_posting.php	Edit Delete
45	*/8	*	*	*	php -q /home/someuser/public_html/abc123/coppermine_posting_verify.php	Edit Delete

In this example, comment search and posting engines are launched every 8 hours and submitted comments verification engine is also launched every 8 hours.

To prevent your IP address from being blacklisted, it's not recommended to launch comments posting engine more often than every 6 hours, no matter how many domains you promote.

Comments verification engine should be launched at the same interval (if posting module is launched every 6 hours, verification module should also be launched every 6 hours).

Needless to say, you can also configure any module to be launched only once a day, week or month; it's up to your personal needs and expectations. All you need to do is contact your hosting provider for correct cronjob configuration in this case.

Administration Interface

This section is used to view Comment Poster installation details, add promoted domains, write comment messages, manage custom links, view detailed software activity, marketing reports, and more...

Should you need any assistance using Comment Poster, check out Software Configuration Wizard below for step-by-step instructions on how to setup and optimize your installation for maximum performance.

For even more useful tips and suggestions, refer to the Help & Support menu above or simply move mouse cursor over any item you need assistance with; interactive help wizard will display even more information about each supported feature.

PROMOTED DOMAINS

Add New Domains

This section is used to add new domains to be promoted. These domains are used to group different sets of keywords and comment messages, so it's possible to promote different products and services using the same installation.

Unlimited number of domains could be added here. Each new domain should start in new line and have http:// or http://www. prefix to be accepted. When new domains are added, keywords and comment messages could be assigned to them instantly.

Edit Domains

This section is used to manage domains that are used to group different sets of keywords and comment messages.

If any domain needs to be permanently deleted, check the box near domain URL and click 'Edit Domains' button. It will also delete all keywords and comment messages of selected domain.

Domains Blacklist

This section is used to manage domains blacklist. All websites matching these words will be automatically skipped by Comment Poster.

Unlimited number of blacklisted words could be added here. Each new word should start in new line and contain 2 or more symbols to be accepted.

Websites will be ignored if any part of blacklisted word is detected. For example, if word 'sex' is added, websites like 'sex.com' or 'loud-sexto-music.com' will be skipped.

DOMAIN KEYWORDS

Add New Keywords

This section is used to add new keywords that are used to search for targeted sites. Each keyword is used only once (unless keywords resubmission is enabled) to prevent targeting the same page for multiple times. It's recommended using 100 or more keywords per domains for best results.

Unlimited number of keywords could be added here. Each new keyword should start in new line and contain 3 or more symbols to be accepted.

It's possible using quotes for exact search because results for some keyword and "some keyword" might be different.

Edit Keywords

This section is used to manage keywords that are used to search for targeted sites. Each keyword is used only once (unless keywords resubmission is enabled) to prevent targeting the same page for multiple times.

Domain URL should be clicked first to see all keywords assigned to this domain. It's recommended using 100 or more keywords per domain for best results.

If any keyword needs to be permanently deleted, check the box near keyword and click 'Edit Keywords' button.

COMMENT MESSAGES

Add New Comments

This section is used to add new comment messages that are submitted to targeted sites.

Unlimited number of comments could be added here. Each new comment should start in new line and contain 10 or more symbols to be accepted. Each comment also supports special variables for making its content relevant and unique (move mouse over Comment Messages section for examples).

Attention! For best results, URLs should not be manually added to comment messages. Simply add %URL% variable which will be converted into correct URL on autopilot.

Edit Comments

This section is used to manage comment messages that are submitted to targeted sites. Domain URL should be clicked first to see all comment messages assigned to selected domain.

If any comment needs to be permanently deleted, check the box near comment text and click 'Edit Comments' button.

CUSTOM LINKS

Add New Links

This section is used to add new custom links that are used to post comments. Only valid site links should be added here (if simple links to domain index page are added, submissions will fail).

Unlimited number of links could be added here. Each new link should start in new line and contain http:// or http://www. prefix to be accepted.

Edit Links

This section is used to manage custom links that are used to post comments. Domain URL should be clicked first to see all links assigned to this domain.

If any link needs to be permanently deleted, check the box near link and click 'Edit Links' button.

ADVANCED PLUGINS

.edu Backlinks

It's no secret that single link from edu website provides much higher value than dozens of links from standard pages, so take a benefit of edu backlinks with the help of this useful addon. The plugin automatically finds edu sites for each keyword related to your niche and submits backlinks to these resources for extra credits in search engines.

Feed Spider

Got daily updated blogs and want to promote new entries on autopilot? Activate RSS feed spider, add feed URLs of your blogs (or other sites that use RSS feeds) and watch how plugin automatically scans your pages for new content every X hours/days/weeks (you set the interval). As soon as new pages are found, the plugin adds them to comments posting engine and starts builds new backlinks instantly

Sitemap Spider

Many companies and individuals manage daily updated sites and want new content to appear in search engines and other resources as soon as possible. Sitemap spider plugin makes this task easier than you could ever expect; the plugin automatically extracts new pages from unlimited number of sitemap files and starts building backlinks to them instantly. Needless to say, it also removes all duplicates on autopilot.

Sites Search

We found some clients to use Comment Poster for targeted sites search only, so we developed a plugin to make this task easier. Just enter unlimited number of keywords and watch how sites search plugin returns thousands of links to targeted sites that have comments posting enabled. All links are returned as plain text, so you can easily import the data to Excel, CSV files, MySQL databases, and so on.

SOFTWARE SETTINGS

General Settings

This section is used to modify software settings, configure sites search and comments posting options, activate and deactivate extra features, enable advanced options and customize each single aspect of Comment Poster in order to make it as individual as you are.

Database Cleanup Settings

This section is used to manage automatic database cleanup module and configure its settings.

It's recommended having automatic database cleanup module enabled because it highly improves Comment Poster performance and reduces system resources usage by removing used keywords, out-of-date reports, and other old data that is not used anymore.

Check for Updates

This section is used to check for Comment Poster updates.

PROXY SERVERS

Add New Proxy Servers

This section is used to add new proxy servers that are used for posting comments. If more than one server is added, Comment Poster will automatically select a random server each time when comments posting engine is launched.

Unlimited number of proxy servers could be added here, but if any of servers is invalid or does not work properly, submissions will fail.

Edit Proxy Servers

This section is used to manage proxy servers that are used for posting comments. If any proxy server needs to be permanently deleted, check the box near proxy address and click 'Edit Proxy Servers' button.

SOFTWARE REPORTS

Marketing Reports

This section is used to view comments posting engine reports of Comment Poster. You can check sites search and posting activity, submitted comments, and more. If any report needs to be permanently deleted, check the box near report date and click 'Delete Reports' button.

Extended Reports

This section is used to view extended reports of Comment Poster. You can check full activity and detailed reports of actions performed by system user. If any report needs to be permanently deleted, check the box near report date and click 'Delete Reports' button.

Submission Reports

This section is used to view submitted comment reports. Each report item includes a full link to page URL, submission date and verification status.

Domain URL should be clicked to see all reports assigned to this domain. If any report needs to be permanently deleted, check the box near report and click 'Edit Reports' button.

Attention! This section displays comments that were successfully posted to remote sites; if links to your sites are not displayed on these sites, refer to knowledgebase for more details.

DATA IMPORT & EXPORT

Export Software Data

This section is used to export software settings and data to another Comment Poster installation. Simply copy desired data from export forms below and paste it into another installation using Import Software Data section. No changes should be made to exported data; copy/paste the data exactly as it is.

Import Software Data

This section is used to import software settings and data from another Comment Poster installation. Simply copy desired data from another installation using Export Software Data section and paste into import forms below. No changes should be made to imported data; copy/paste the data exactly as it is.

DASHBOARD SECTION

Mass Actions

This section is used to perform mass actions. With single mouse click it's possible to delete promoted domains, delete used keywords or mark them as unused, delete custom links and mark them as unused, clean up unique domain and blacklisted domain filters, delete proxy servers, delete system and marketing reports, and more.

Select actions you want to be performed and click 'Perform Mass Actions' button.

Cronjob Verification

This section is used to manually launch Comment Poster cronjobs and verify software installation. Extended and marketing reports section should always be checked first for more detailed information about possible issues.

It's recommended to use manual verification only if some tasks are not automatically launched or if you believe that cronjobs do not work properly. Any module can be manually launched using selected section below. If multiple modules need to be verified, they should be launched one by one (not all of them at the same time).

Each module will be launched in new window; please wait for confirmation message to be displayed before closing the window. If message of success is displayed, but the software still cannot be automatically launched, contact your hosting provider (not our support desk) and ask for assistance configuring cronjobs. If message of failure is displayed, simply contact our support desk for further investigation.

Cronjob verification command will launch the real cronjob as well. For example, if you test comments posting cronjob, posting actions will be performed right after cronjob verification.

Change Password

This section is used to change administrator email and/or login password.

If you change administrator email address here, licensed email address will not be changed. Only the address used to send lost passwords will be modified.

Your new password must contain 6 or more symbols to be accepted.

Log Out

This button logs you out and closes Comment Poster administration interface.
